

① * Ping Command is used to check whether the connected network devices working.

* If sent request to the connected network devices they will reply to it.

② Once we used ping Command it show request to 50.0.0.10 and receive that request and sent reply to it.

③ SMB (Server Message Block) ~~it is~~ it is a network file-sharing protocol used mostly on Windows to share files, printers and all network devices across resources.

④
